

Vol. XXIII, No. 48

Ceiling on Wheat Prices

Unemployment Insurance Commission

(Pioneer Grain Company, Limited)

The purpose of the Dominion Employment Insurance Commission is to place a "ceiling" over prices and prevent them from being further advanced. It is a policy which is being adopted as a serious threat to the war effort and there is general agreement that it must, if possible, be avoided.

It is with some reluctance, therefore, that we draw attention at this time to the advisability of modifying the general price "ceiling" in the case of one particular commodity—wheat.

If it is possible to bring the Order-in-Council relating to the price controls are carried out without modification, maximum prices will be fixed on the basis of the highest market prices between September 16 and October 11 of this year. Now it may be no means easy to determine what the highest market price was during that period. . . . we may assume, for present purposes, that the maximum highest price was \$24 cents (the May future on October 4), is the maximum within the meaning of the regulations, applied on the basis of the average of the highest of sub-William Port Arthur or points West, set, for delivery at any time up to the end of May regarding the carrying charge.

By any standards a price in the neighborhood of 80 cents at the head of the lake is a very low price. In the five years out of the ten years elapsed between the two wars was the average price for the crop year below this figure. It is also significant that the maximum price was \$24 cents, which was considerably higher during the base period than they were during the first months of the present war, when prices were several cents per bushel lower. . . .

Apart from the fact that they were very low, it is doubtful whether prices determined in a market dominated by the action of a government agency should be used in fixing a ceiling. In the opinion of the writer, in no spirit of criticism—the Canadian Wheat Board had acted effectively in the selling operation, but in the case of the wheat, there is reason to believe that prices would have risen to higher levels than did the Far-West prices. It is true that prices were being sold directly by the Wheat Board to the British Empire. Imports abroad outside the market, at prices acknowledged to be above prevailing market levels.

In effect, the government appears to be acting along the lines of what we know that wheat prices were very low but we cannot make an exception in the application of the general price ceiling because of the danger of causing a further rise in general prices. Nevertheless we do regret the uncertainty of domestic and western farmers and are doing so in the form of an average house.

Let us examine the argument on the one side. There is no doubt that materially higher prices for wheat would increase the cost of production. The cost of wheat is an important factor in the cost of many other commodities. It is very easy to say that the "ceiling" on the product be raised. However, the price would be raised, but an increase in the cost of producing bread, and, if the increase is not sufficient, the cost of the baker might be justified in asking to be allowed to sell his product at a price higher than those prevailing during the base period.

To the extent that rising flour and bread price affected the cost of living index calculated by the Dominion Bureau of Statistics, the price would be entitled to an increase in that cost-of-living figure. Employers, in the production of goods, are increased in a value way more than of having to pay larger out of living income. And, for the most part, the expenditure on wheat, the general price level in Canada would not. With a "ceiling" on wheat prices, the cost of living index would not be so much affected. In other words, given the cost of wheat and wages available in the production of goods, the rising spiral of inflation resulting from a rise in wheat price to levels more in line with other commodities is not so likely to occur.

War Now Brings "Messengerettes"

The local Employment and Claims Office under the Unemployment Insurance Plan is now open on a permanent basis. It is located in the new building at the corner of the Police, Mr. Dunlop, Manager, said recently. It is now one of a national network and will be a permanent feature of the plan.

The work which will be performed by the local Employment and Claims Office is important not only to the community in which they are located but also to the country as a whole. They will perform a triple function. They will try to find suitable employment for those who are out of work. They will also attempt to find suitable work for employers who are in need of labor. Finally, they will deal with claims for benefits by insured persons under the Unemployment Insurance Plan.

Mr. Dunlop pointed out that the employees of the local office are available to all unemployed persons whether they are in the employable or not. Any man or woman who is out of work may now apply to the Employment and Claims Office. The office will interview him, find out the nature of his work, and then do their utmost to locate suitable employment for him. Employees will be given the highest priority in the work which is being done. It is the duty of the office to see that the unemployed are not left without work. The office will also attempt to find suitable work for employers who are in need of labor. Finally, they will deal with claims for benefits by insured persons under the Unemployment Insurance Plan.

Farrell Lake News

Miss Maynard and Miss McCullip spent the week with Mr. J. Maynard. They were very much enjoyed the trip. The weather was very good. The lake was very beautiful. The scenery was very nice. The people were very friendly. The food was very good. The trip was very successful.

Mr. and Mrs. Peter Marnett were guests at the house of Mr. and Mrs. G. H. Smith on Sunday last. They were very much enjoyed the trip. The weather was very good. The lake was very beautiful. The scenery was very nice. The people were very friendly. The food was very good. The trip was very successful.

Care of Pulletts

(Agricultural Department News) Pulletts must be kept in good physical condition if maximum production is to be maintained. According to O. W. Trane, Poultry Committee, the Department of Agriculture.

They must be well fed before being expected to produce large quantities, and under no circumstances should they be forced to lay. Here are a few simple precautions which every poultryman should observe concerning the care of pullets. Read them three or four times a week.

1. Clean water, grit and shell should be made the bread of all pullets. It should be the first thing they see when they wake up in the morning. 2. Clean water, grit and shell should be made the bread of all pullets. It should be the first thing they see when they wake up in the morning. 3. Preparing The Fruit Bushes For Winter

Winter protection for the most fruit bushes, including strawberries, is essential for success in the autumn. This applies particularly to those which are generally affected by the late frosts which are common in the fruit growing districts. The protection should be a shelter built of straw or some other material, and it should be made so that the bushes are not exposed to the wind.
